

European Journal of INDUSTRIAL ENGINEERING

CALL FOR PAPERS

Feature Issue on

"Models and Algorithms for Operations Management"

Guest editors

Ammar OULAMARA

Marie-Claude PORTMANN
LORIA Laboratory, Nancy

Brief description of the topic:

The *European Journal of Industrial Engineering* (EJIE) will publish a feature issue on Models and Algorithms for Operations Management. Over the recent years, a growing literature for operations management has emerged. This results in designing new models and algorithms for several operations management problems. This feature issue focuses on developing original models and algorithms for operations management problems arising in business, engineering and science.

This issue provides an opportunity to the community of operational researchers to publish high quality, original papers that contribute to development of operations management methodology as well as applications. This call for papers is addressed to participants of the conference ROADEF09 (<http://roadef2009.loria.fr>).

The objective of this special issue is to publish original works in operation management, which discuss theoretical, algorithmic and computational aspect, and may deal with but are not limited to: scheduling in industry and service, transportation, supply chain management.

Submission guidelines and important dates:

Deadline for submissions: **September 10, 2009**

Approximate date of completion: **February 2010**

We are looking for papers that are original, unpublished and not currently under consideration for publication elsewhere. Extended abstracts included in ROADEF09 conference proceedings must be converted into full papers. The format of manuscripts for *European Journal of Industrial Engineering* can be found at: <http://www.inderscience.com/mapper.php?id=31> under 'Author Guidelines'

Submissions:

Please send your manuscripts by email (.pdf or .doc or .ps) to one of the following guest editors by **September 10, 2009**.
